First, one has to have a decent set of hardware that can effectively perform the intensive mathematical calculations needed for mining. There are different types of processing systems, which will be discussed below: CPUs At the earliest conception of the Bitcoin system, the only way that a miner can obtain Bitcoins is via CPU mining. This was how the Bitcoin mining industry was born. As mentioned earlier, however, the degree of difficulty for the entire network continues to increase as time passes and as processing capabilities improve.

Nowadays, serious mining done through CPU alone would be impractical and would put its user at a disadvantage. Therefore, newer systems have been born. Despite this, CPU mining is how most miners expose themselves to the requisite processes, and newer innovations such as mining pools allow those who only have CPUs at their disposals to earn Bitcoins that they wouldnt have been able to mine alone.
