

## Dancing in the Operating Room

Would you believe that an Archbishop's blessing could spell the difference between life and death? Or that a 150-year-old artillery shell could still deal death and destruction to those around it? This book takes readers on a journey through a place that most people will only see on one of the worst days of their life. It's a place where surgeons have brought people back from the edge of death. Where they have talked to a woman, looked into her eyes as she asked for help, and watched the spark of life vanish from those eyes. *Dancing in the Operating Room* is a memoir, a collection of stories and essays about life, love, and faith in the world of trauma surgery. Some of the stories, like those above, are patient stories; some are uplifting, like the ex-con who steps up to save his sister from making the same mistakes that he did, or the 17-year-old girl who fought through sixteen operations to save her leg, but lost in the end, only to find a renewed faith in her family and church. Some are observations of a current problem or a difficult phase of treatment or training. Some are downright depressing and talk about the personal cost of doing high-risk/low-reward surgery. Written by a trauma surgeon with twenty-five years of experience in the high-intensity world of acute care surgery, *Dancing in the Operating Room* is a series of short essays ranging in length from 250 to 2400 words, each written to illustrate a particular experience, a patient story, or to give an insight into the thought process of a surgeon. The situations range from the mundane, to the humorous, to the deadly serious. Only one thing is certain: every trauma shift is a new adventure.
