

## Jeffersons Shadow

In the voluminous literature on Thomas Jefferson, little has been written about his passionate interest in science. This new and original study of Jefferson presents him as a consummate intellectual whose view of science was central to both his public and his private life. Keith Thomson reintroduces us in this remarkable book to Jeffersons eighteenth-century world and reveals the extent to which Jefferson used science, thought about it, and contributed to it, becoming in his time a leading American scientific intellectual. With a storytellers gift, Thomson shows us a new side of Jefferson. He answers an intriguing series of questions: How was Jeffersons view of the sciences reflected in his political philosophy and his vision of Americas future? How did science intersect with his religion? Did he make any original contributions to scientific knowledge? and illuminates the particulars of Jeffersons scientific endeavors. Thomson discusses Jeffersons theories that have withstood the test of time, his interest in the practical applications of science to societal problems, his leadership in the use of scientific methods in agriculture, and his contributions toward launching at least four sciences in America: geography, paleontology, climatology, and scientific archaeology. A set of delightful illustrations, including some of Jeffersons own sketches and inventions, completes this impressively researched book.
