

Managing in the Middle: 17 Irreverent Principles for Success as a Department Chair in Higher Education

Partly serious, partly humorous, **MANAGING IN THE MIDDLE** sets forth 17 irreverent principles for use by a department chair at the college/university level. As a university department chair for over 25 years, the author relates over 20 Case Studies to illustrate the various principles and their corollaries. This book is meant to be fun, although all 17 principles are grounded in a certain amount of truth. But they are exaggerated into grand principles in order to poke gentle (or not-so-gentle) fun at the foibles of higher education and its practitioners. The result is a series of caricatures--stories that are related to reality but are carried to absurdity in order to create humor. Among the principles are topics such as accreditation, hiring, faculty evaluation, dealing with difficult faculty members, donors, and university administrators. Yes, the principles and case studies are irreverent and politically incorrect, but if approached from an open-minded point of view, they can be entertaining, humorous, and perhaps even occasionally instructive!
